descriptors continued fractions e qu ion p r urb tion t eory green s function differe tial equations a problem of continuing interest is that of obtaining approximate solutions of the functional equation $l(u + \lambda b) \leq 0$ where l is a linear

transformation in terms of the solution of the unperturbed equation. Using the Green's function or equivalent technique regarding the term involving λ as a forcing term we can convert the first equation to the form $u'' + \lambda u = f(t)$ where t is a linear transformation. We present a new approach to problems of this nature using the classical technique of continued fractions.
